

Definitions for SOR/E-Quote/ODP online module

Internal Transaction	Describes a unit or an option purchased from a TLD Factory
<i>Base Unit</i>	Basic (provided as a standard) configuration of this product type
<i>Option</i>	Option (special feature) to be added to the Base Unit
External Transaction	describes an article, service or expense directly related to a sale and purchased from a non-TLD company
<i>Agent Commission</i>	Commission paid to an agent usually as a % of the sale contract or but sometimes also as a fixed amount. Commission is paid to cover Sales and Service costs of the agent related to the sale of equipment or parts. This commission will be deducted from the total gross selling price when calculating the sales margin – to be filled only if the commission does not fall under the Indirect Cost category, according to the TLD procedures
<i>Commissioning</i>	The commissioning is a item that can be sold to the customer and therefore can have a Price but that also does not have a cost. It increases the sales margin.
<i>Components</i>	Other components of the order not purchased internally and not spare parts (e.g. commercial truck chassis for truck-mounted units)
<i>Misc. items</i>	Category to cover all other possibilities not covered by other categories. Description should always be provided
<i>Spare Parts</i>	Spare parts provided with the units sold. The cost that should appear in that item is the MIP-20%.
<i>Special Discount</i>	Discounts given to the customer and not included in the selling price of the unit (e.g. year end rebates)
<i>Taxes & Duties</i>	Taxes, custom duties and similar directly related to the sale of the units.
<i>Transportation</i>	Transportation costs (best estimates if no quotation available). The cost should be the best estimate of the transportation cost without sales mark-up.
Internal Transaction Prices	
<i>Published TP</i>	Transfer price as published by the Factory; in the currency of the factory TP list.
<i>Negotiated TP</i>	Transfer price actually negotiated between Factory and Sales organization – in the currency negotiated
<i>Published Price List</i>	Recommended Selling Price, most of the time it should be , Published TP / 0,90 – in the currency of the factory. <i>Each Sales Director defines the pricing policy on its territory.</i>

<i>Actual Sales Price</i>	Actual selling price to the customer of each item, in the currency of the sale. The sum of all Actual Sales Prices is the Net Gross Selling Price.
---------------------------	--

External Transaction Prices

<i>Cost</i>	Purchase cost of the item without sales mark-up
<i>Sales Price</i>	Selling price of the item to the end customer

Summary Section

<i>Quantity</i>	Quantity of the units sold (all units must exactly the same)
<i>Unit Gross Selling Price</i>	Total of the selling prices of External Transactions (<i>Sales Price</i>) and Internal Transactions (<i>Actual Sales Price</i>)
<i>Total Gross Selling Price</i>	Unit Gross Selling Price x Quantity
<i>Customer Discount</i>	[Total of Published Price List + sum of External Transaction Costs] – [Unit Gross Selling Price]
<i>Customer Discount %</i>	Customer Discount / [Total of Published Price List + sum of External Transaction Costs]
<i>Factory Discount</i>	Published TP - Negotiated TP (converted in the published TP currency if necessary)
<i>Factory Discount %</i>	Factory Discount / Published TP
<i>Unit Cost</i>	Total of Negotiated TP and sum of all External Transactions Costs
<i>Total Cost</i>	Quantity x Unit Cost
<i>Total Net Selling Price*</i>	<i>Total</i> Gross Selling Price – Cost of all External Transactions except Costs of Spare Parts and Components
<i>Unit Net Selling Price*</i>	Total Net Selling Price / Quantity of units
<i>Total Margin</i>	<i>Total</i> Gross Selling Price less all internal and external transaction costs
<i>Sales Margin %</i>	<i>Total</i> Margin / Total Net Selling Price
<i>Unit Margin</i>	Total Margin / Quantity

OPD./Dates definitions:

Customer Requested Delivery Date	Factory Promised Delivery Date	PO Acceptance Date	Estimated GT date	Current Projected Delivery Date	Actual Green Tag Date	EXW Ship Date	Factory invoice Date	Revenue Recognition Date	Parts Date
----------------------------------	--------------------------------	--------------------	-------------------	---------------------------------	-----------------------	---------------	----------------------	--------------------------	------------

PO Acceptance Date This is the date at which the SSO PO was accepted by the factory. This date is recorded automatically in the SOR Line and ODP online when SOR Line status changed to PRINT_FACTORY_SO_ACK.

Customer Requested delivery Date This is the date the customer requested the unit to be ready EXW for being shipped out of the factory. SSO enter this date that cannot be edited later on. This date is coming automatically in the ODP online from the SOR Unit.

Factory Promised Delivery Date This is the date coming from the PSM of the factory when acknowledging the SOR Line. This date is recorded automatically in the SOR Line and ODP online when SOR Line status changed to PRINT_FACTORY_SO_ACK.

Estimated Green Tag date: This date is being updated by the PSM during the production of the unit. The PSM edit this date directly in the ODP through EDIT mode. A log of all changes of the estimated GT date is being recorded to follow the evolution of this date.

Current Projected Ship date :

Actual Green Tag Date: This date is recorded normally only once when the unit is Green Tagged by the factory. However, changes of the dates are being logged for special cases (modifications of units in particular or case of the Yellow tags) This date is compared to the Factory Promised date to judge whether a unit was late or not.

EXW Ship date: This date is normally recorded once the day the unit is being shipped out of the factory. The shipping of units being under the responsibility of the SSO, the SSO should inform the PSM of this date and the PSM will input the relevant date.

Factory Invoice date This is the date the unit was invoiced by the TLD factory to the TLD SSO. This date input by the PSM or Accounting Department.

Revenue Recognition Date This is the date the unit invoice to the end customer (not the internal customer) can be recognized in the books of the SSO. This date is input by the sales Administration or Accounting Department.

ODP Online MATRIX definitions

A unit is displayed in the ODP online whenever an ER exist for that unit and the unit has not been shipped yet out of the factory (That have no *EXW Ship Date*)

ODP by Factory, Sales Org

	NO_SSO	TLD AME	TLD ASI	TLD EUR	Totals
MONTLOUIS-SUR-LOIRE	27	14	2	45	88
NO_FACTORY	2				2
SHANGHAI	68	18	8	21	115
SHERBROOKE	22	21	15	8	66
ST LIN	114	1	12	63	190
TAIPEI	7		16		23
TLD JST	5			65	70
WINDSOR	72	144	10	85	311
Totals	317	198	63	287	865

The unit/ER disappears from the OPD online matrix as soon as the unit has been shipped, in other words if the *EXW Ship Date* has been filled.

Units in the column NO_SSO, should only be units pre-launched by the factory and not linked to any SOR# or to any Customer PO.

On time delivery performance of the factory.

The **Number GT** is the quantity of units that have been green tagged during the period (Month) or in other words, with *Actual Green Tag Date* falling in this period (Month)

A unit is considered as late if the three conditions are met:

1. The unit is linked to an SOR#
2. Today is later than the *Factory Promised Delivery Date*
3. There is no *Actual Green Tag Date*

Factory On Time Delivery Performance for current month of Feb

Factory	Number GT	Number On Time	% On Time	Average Days Late
MONTLOUIS-SUR-LOIRE	3	1	33	43
SHANGHAI	1			14
ST LIN	4			15
TLD JST	27			28
WINDSOR	8	4	50	20

The **Number On Time** is the quantity of units that have been green tagged on time (Or not late) during the period (month)

The **% On time** is the number of units on time divided by the number of units green tagged during the period (**Number On Time/Number GT**).

The number of days late for one unit is the positive difference between the *Actual Green Tag Date* (or Today if there is not actual GT date) and the *Promised Factory Delivery Date*.

The **Average Days Late** is the sum of days late of all units GT in the period divided by the number of units Green Tagged during the period.

Factory Dashboard

The units listed in the **factory backlog** are units linked to an ER and that have not been Green Tagged yet.

The **number of units green tagged in the past 2 weeks** are all the units (whether or not they are linked to a SOR#) that have had an *Actual Green Tag Date* in the past two weeks.

The **number of units green tagging within the next 2 weeks** are all the units that have had an *Estimated Green Tag Date* that falls into the coming two weeks.

Global Factory Dashboard

	Factory Backlog	Number Green Tagged in previous 2 Weeks	Number Green Tagging within next 2 weeks	Number Late	Number Shipped in previous 2 weeks	Number Shipping within next 2 weeks	GT Not Shipped (GTNS)
MONTLOUIS-SUR-LOIRE	45	2	2	12	0	8	14
SHANGHAI	48	1	4	5	7	10	10
SHERBROOKE	45	0	0	12	0	11	10
ST LIN	45	6	2	23	0	15	45
TAIPEI	12	0	4	5	0	2	4
TLD JST	50	27	0	23	0	0	5
WINDSOR	162	8	14	20	0	26	56
Totals	407	44	26	100	7	62	144

The **number late** is the number of units of the backlog currently being late.

A unit is considered as late if:

- The unit is linked to an SOR#
- Today is later than the Factory Promised Delivery Date
- There is no Actual Green Tag Date

The **number shipped in previous 2 weeks** is all the units that have had an EXW ship date in the past two weeks from today.

The **number shipping within the next 2 weeks** is the number of units with a Current Projected Ship Date that falls into the coming two weeks.

The **GT Not shipped (GTNS)** is the number of units that have been Green tagged already (with an Actual Green Tag date) but that have not been shipped yet (That have no EXW Ship Date). These units should be in the factory Yard
